

# OOD1 Exercise

Mohammad Faraz Idris Siddiqui

**This is the GitHub link for all the codes:**

[https://github.com/feedme007/Software-Engineering-UPC-Codas/tree/main/Assignment-3\(OOD-1\)](https://github.com/feedme007/Software-Engineering-UPC-Codas/tree/main/Assignment-3(OOD-1))

## 1) Use cases

- **Add Person**  
Actor: Admin  
Goal: Store a new person with license number, name, surname, address.  
Main flow: Admin enters data -> system saves if license is unique.
- **Edit Person**  
Actor: Admin  
Goal: Update name/surname/address of an existing person.  
Main flow: Admin selects person by license -> edits fields -> system saves.
- **Delete Person**  
Actor: Admin  
Goal: Remove a person.  
Main flow: Admin selects person -> system deletes and clears ownership on any vehicle they owned.
- **Add Vehicle**  
Actor: Admin  
Goal: Store a new vehicle (car or motorcycle) with plate, maker, model, and technical data.  
Main flow: Admin enters data -> system saves if plate is unique.
- **Edit Vehicle**  
Actor: Admin  
Goal: Update maker/model and the specific data (displacement or CO<sub>2</sub>/fuel).  
Main flow: Admin selects vehicle by plate -> edits fields -> system saves.
- **Delete Vehicle**  
Actor: Admin  
Goal: Remove a vehicle from the system.  
Main flow: Admin selects vehicle by plate -> system deletes.
- **Assign/Transfer Vehicle**  
Actor: Admin  
Goal: Set or change the owner of a vehicle.  
Main flow: Admin selects plate and target license -> system sets owner (can be null to remove owner).
- **Calculate Vehicle Tax**  
Actor: System (on request)  
Goal: Compute the annual tax for a single vehicle.  
Rules:

Motorcycle  $\rightarrow 0.10 \times \text{displacement}$

Petrol car  $\rightarrow 1.4 \times \text{CO}_2$

Diesel car  $\rightarrow 1.8 \times \text{CO}_2$

Hybrid car  $\rightarrow 1.2 \times \text{CO}_2$

- **Generate Annual Taxes Report**

Actor: Admin

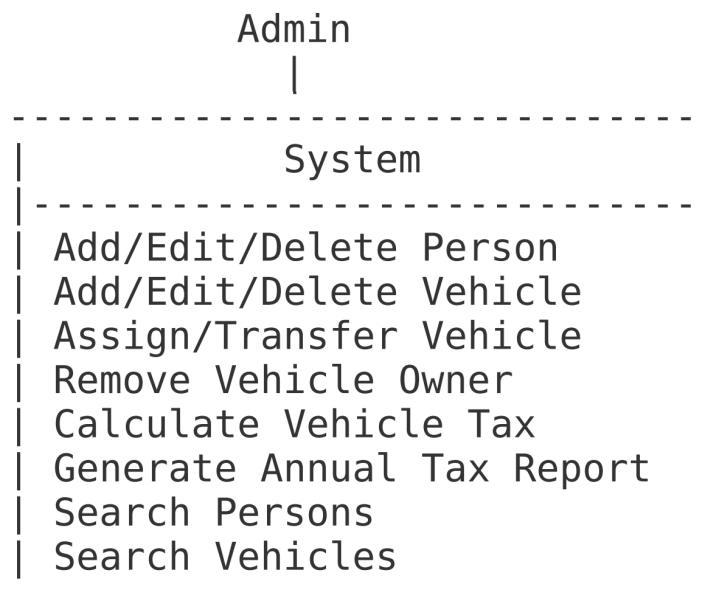

Goal: List each owner, their vehicles, per-vehicle tax, total per owner, plus vehicles without owner.

- **Search Persons / Search Vehicles**

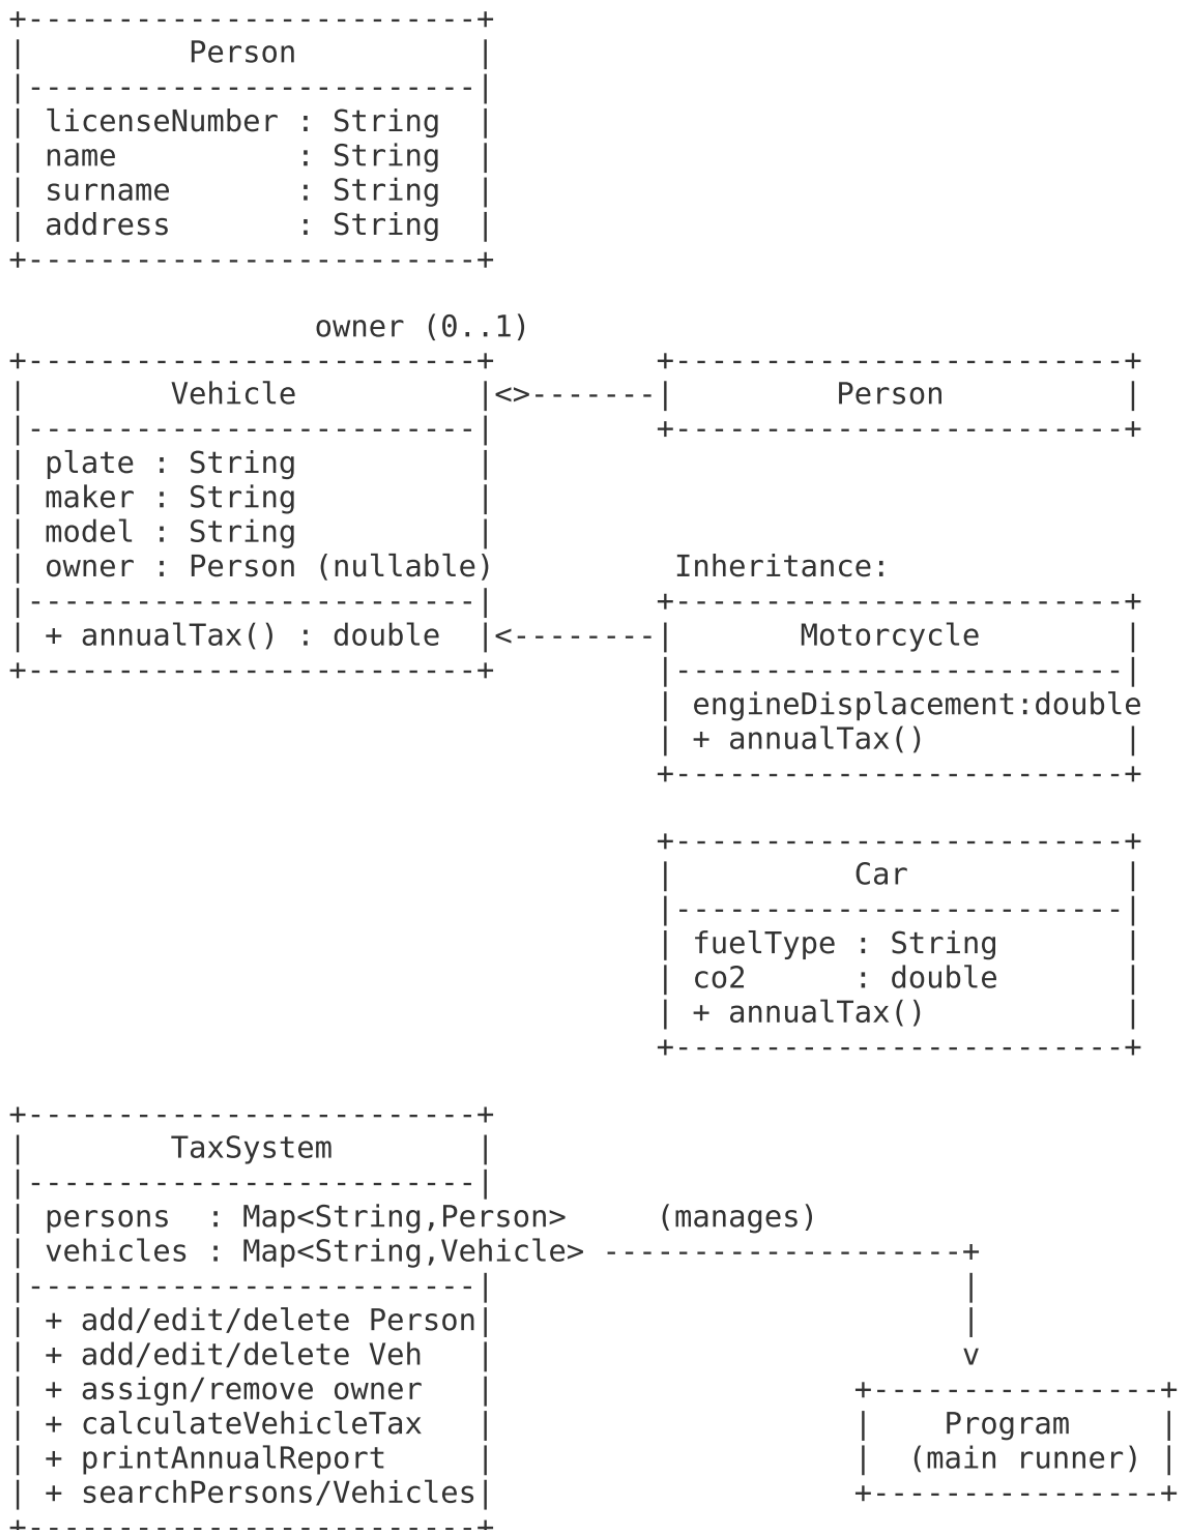

Actor: Admin

Goal: Keyword search on persons (license/name/surname/address) and vehicles (plate/maker/model).

## 1) Use cases Diagram

## 2) Class Diagram

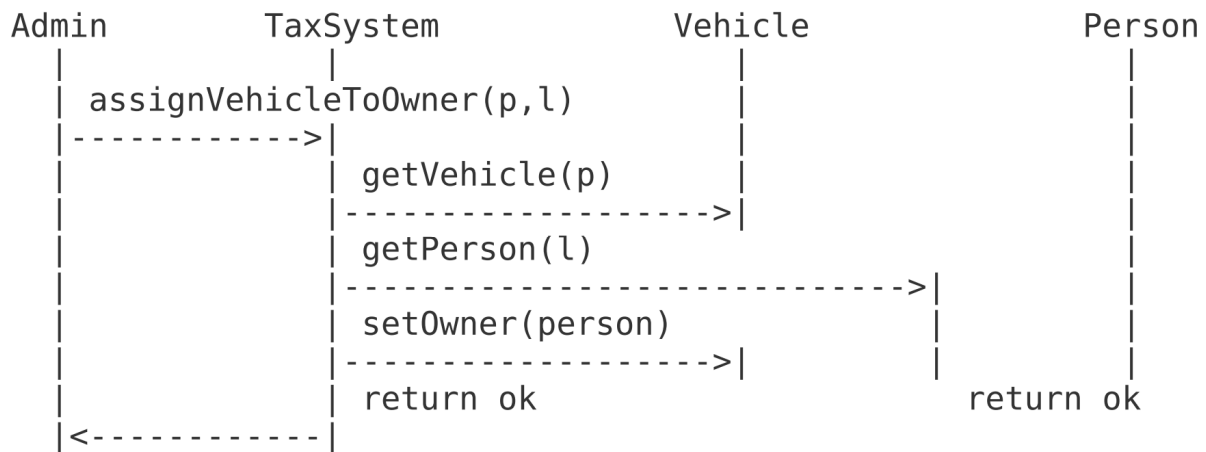

- Vehicle is abstract;
- Car and Motorcycle override `annualTax()`
- owner can be null

### 3) Sequence Diagram

#### a) Transfer Vehicle (assign/transfer owner)

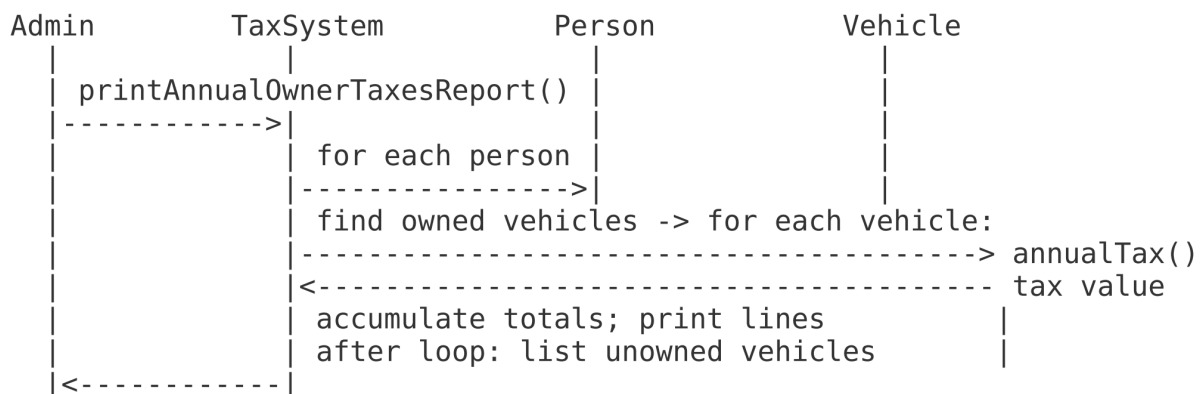

Transfer Vehicle (Assign/Transfer Owner)

Vehicle's owner points to the selected person (or null if removing).

#### b) Taxes listing (annual report)

Taxes Listing (Annual Report)

Per-owner vehicle list with tax per vehicle, total per owner, then vehicles without owner.

## 4) Implementation in Java

The following files contain the full implementation, and they are attached in this repository:  
[https://github.com/feedme007/Software-Engineering-UPC-Codas/tree/main/Assignment-3\(OOD-1\)](https://github.com/feedme007/Software-Engineering-UPC-Codas/tree/main/Assignment-3(OOD-1))
